

**George Lindley Taber Azalea**  
*Rhododendron 'George Lindley Taber'*

Height: 5 feet

Spread: 6 feet

Sunlight:

Hardiness Zone: 7a

Other Names: George Taber Azalea, George L. Taber Azalea

Group/Class: Southern Indica Hybrid

**Description:**

A lovely variety presenting shell pink and white blooms with deep pink blotches; showy when massed in a border or as a garden accent; absolutely must have well-drained, highly acidic and organic soil, use plenty of peat moss when planting

**Ornamental Features**

George Lindley Taber Azalea is covered in stunning clusters of lightly-scented shell pink trumpet-shaped flowers with white overtones and a fuchsia blotch at the ends of the branches from mid to late spring before the leaves. It has green evergreen foliage. The narrow leaves remain green throughout the winter.

**Landscape Attributes**

George Lindley Taber Azalea is an open multi-stemmed evergreen shrub with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

George Lindley Taber Azalea is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use

### **Planting & Growing**

George Lindley Taber Azalea will grow to be about 5 feet tall at maturity, with a spread of 6 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. You may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
